B) - 22 jogos de Modelos - fôlhas 1, 2 e 3

C) - 28 jogos de Modelos - fôlhas 1, 3, 4 e

GÜNTHER HERRMANN

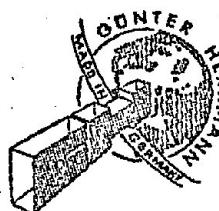

206

Plexiglas

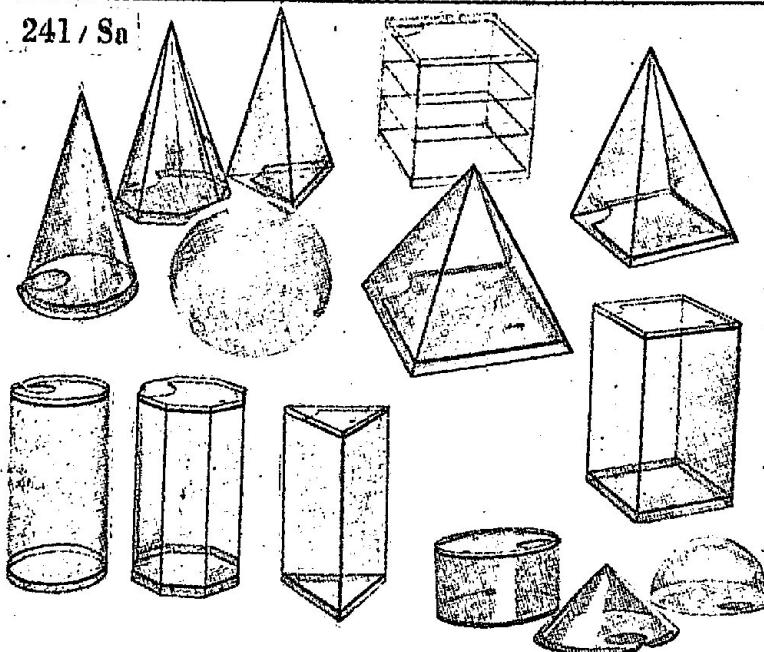

Demonstration model for the formula $C = \pi d$. (Circumference of a circle.) Price does not include base 700/A and supporting device 700/C. Overall dimensions = 390 x 120 mm

MATHEMATICAL MODELS

241/Sa

consists of:
3-sided prism
3-sided pyramid

4-sided prism
4-sided pyramid

8-sided prism
8-sided pyramid

Cylinder
cone

Height = 150 mm
Cube
quadratic pyramid

Height of pyramid
= edge of cube = 100 mm

Sphere
Diameter = 100 mm

Hemisphere
cylinder
cone

Height of cone and cylinder
= radius of all three solids
= 60 mm

241/Sa

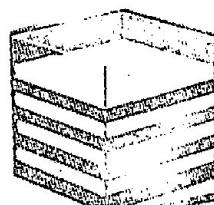

34

Plexiglas

Demonstration model for Pythagoras' theorem.
Hypotenuse = 100 mm

This model consists of detachable elements of area that can be used to fill the square on the hypotenuse or the squares on the remaining two sides.

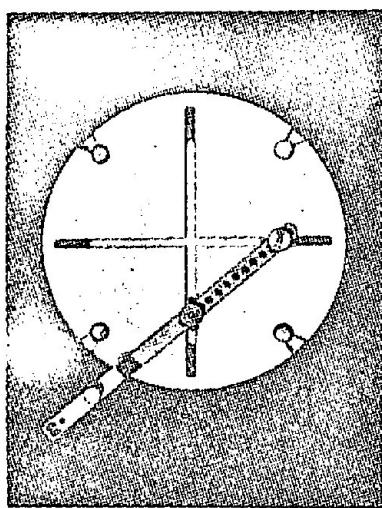

10 cm cube transparent envelope.
Useful for the teaching of volumes.

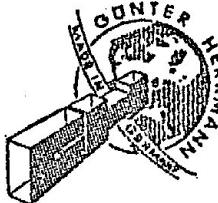

36/N

Elliptical compass.
Diameter of circle = 270 mm

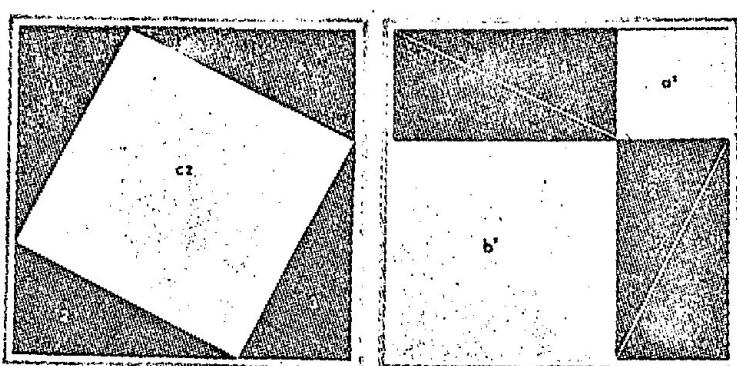

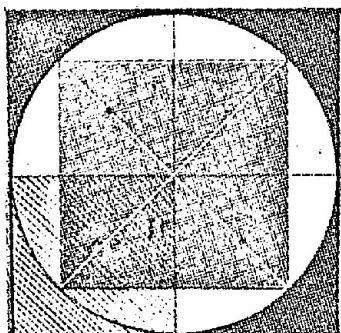

MATHEMATICAL MODELS

234

Model for the area of a circle,
with circumscribed and inscribed
squares. Can be dismantled; areas
in different colours.
245 x 245 mm

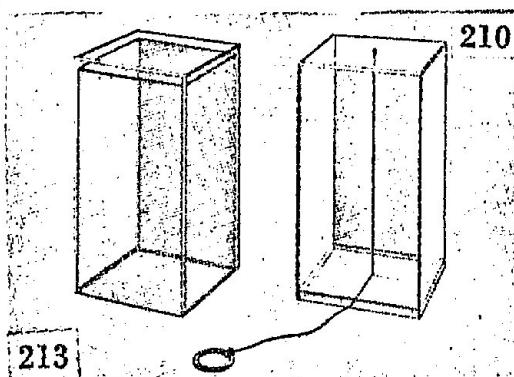

Verification model for Pythagoras' theorem,
with differently-coloured transparent areas.
Can be dismantled.
240 x 240 mm

247

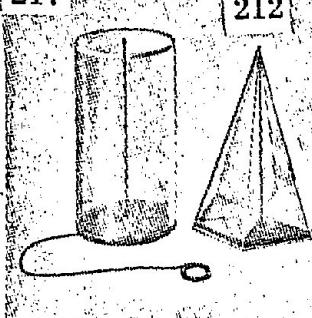

Plexiglas

210 Square prism with movable altitude and coloured, transparent base.
Height = 150 mm

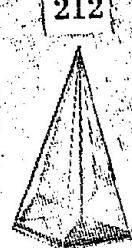

213 Square prism with external surface (net) which can be unfolded.
Height = 150 mm

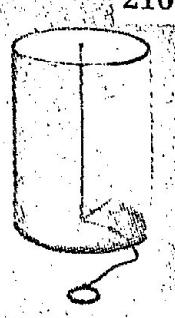

217

212

216

217 Cylinder with movable altitude and coloured base.
Diameter = 80 mm, height = 155 mm

212 Hexagonal pyramid with altitude and marked diagonals and with coloured base.
Height = 150 mm

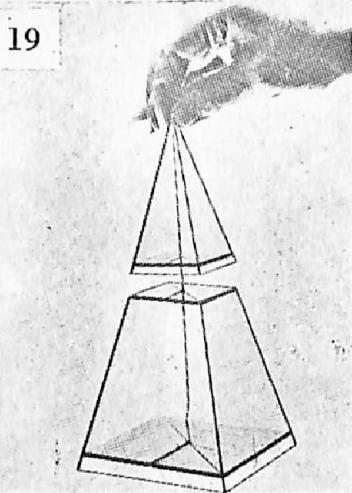

216 Cylinder with movable altitude and coloured base.
Diameter = 110 mm, height = 150 mm

Pyramid which can be dismantled into truncated pyramid and supplementary pyramid, with movable axis.

Total height = 200 mm

This model shows the relationship between two similar solids and also the relationship between the altitude and the slant height of a pyramid.

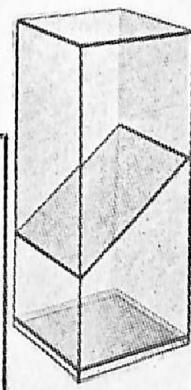

19

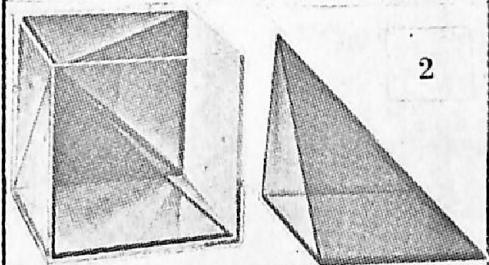

Plexiglas

17/4

Four-sided prism with oblique section.
Height = 200 mm

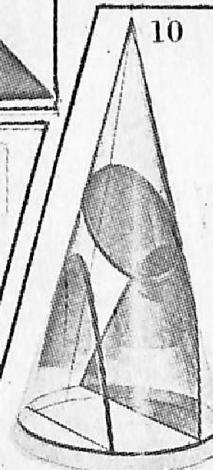

Cube, which can be dismantled into three pyramids of equal volume.
Edge of cube 100 mm
This model is a variation on Model No. 3/G.

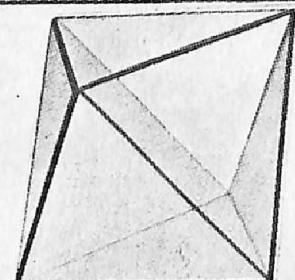

2

11/T

Tetrahedron.
Edges 150 mm

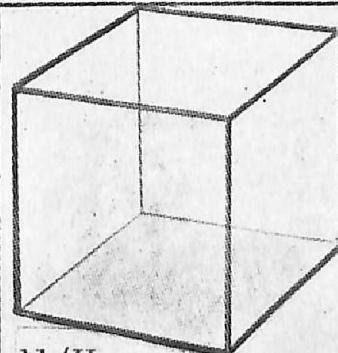

Cone with elliptical, parabolic and hyperbolic sections
Height = 260 mm
Particularly suitable for teaching conic sections.

11/0

Octahedron.
Edges = 100 mm
Invaluable for the
teaching of solids.

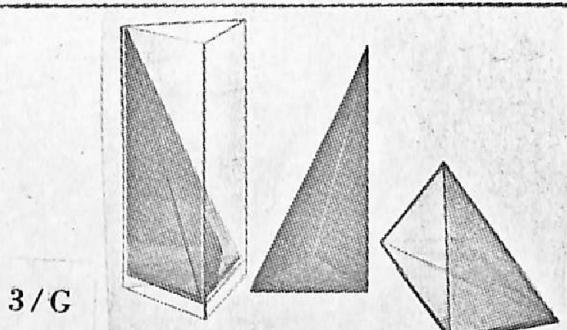

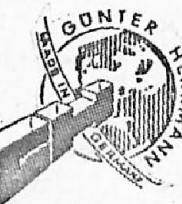

11/H

Hexahedron.
Edges = 100 mm (n. i.)

MATHEMATICAL MODELS

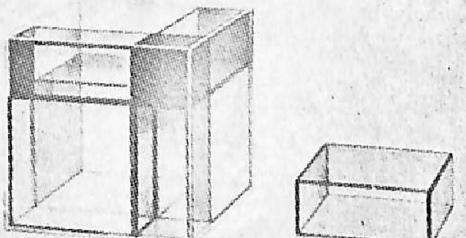

3/G

Three-sided prism with equal sides, which can be dismantled into three pyramids of equal volume.
Height = 200 mm

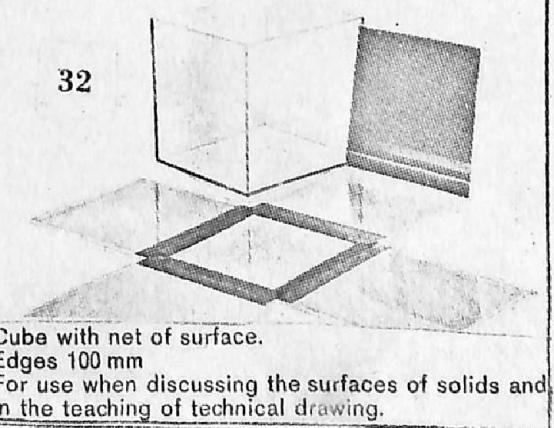

This model demonstrates the fact that the volume of a pyramid is a third of the volume of a prism with the same base and the same altitude.

37

Demonstration model for formula $V = (a + b)^3$.
 $a + b = 100 \text{ mm}$

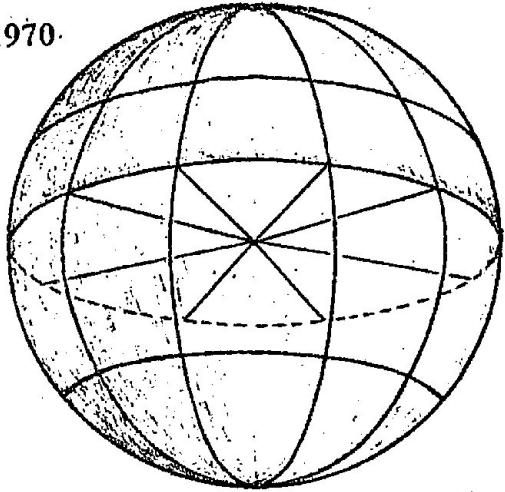

32

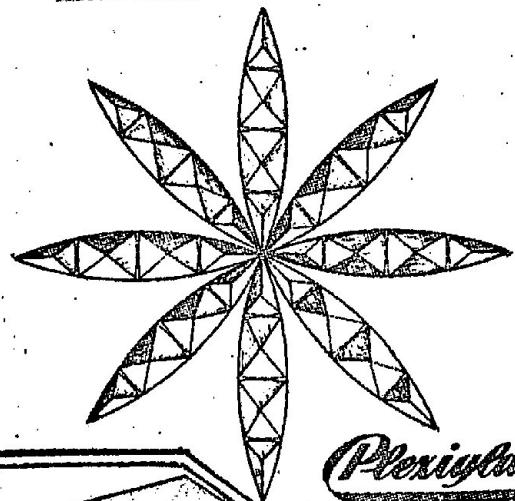

Cube with net of surface.
Edges 100 mm

For use when discussing the surfaces of solids and
in the teaching of technical drawing.

970

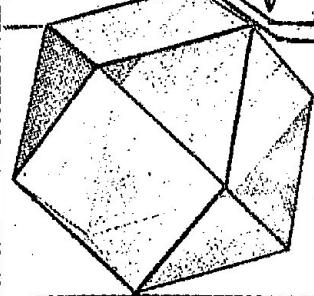

Model for use when teaching spheres.

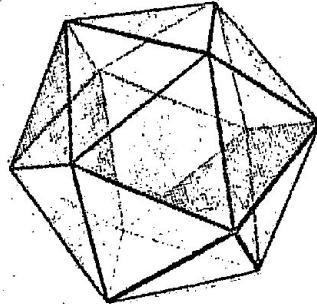

Plexiglas

40

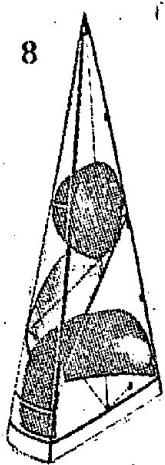

Polyhedron (combination of hexahedron and octahedron)
Edges = .70 mm

Cone with spheres of contact and inclined elliptical plane section, cut in half by an axial plane through the major axis of the ellipse; for two- and three-dimensional demonstrations.
Height = 260 mm

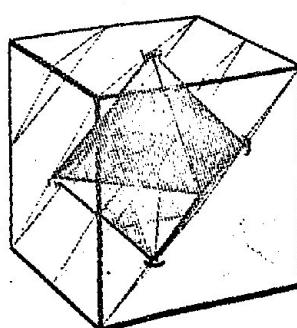

38

Icosahedron.
Edges = 60 mm

8

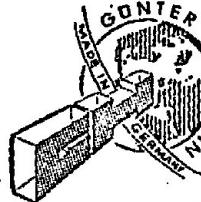

41

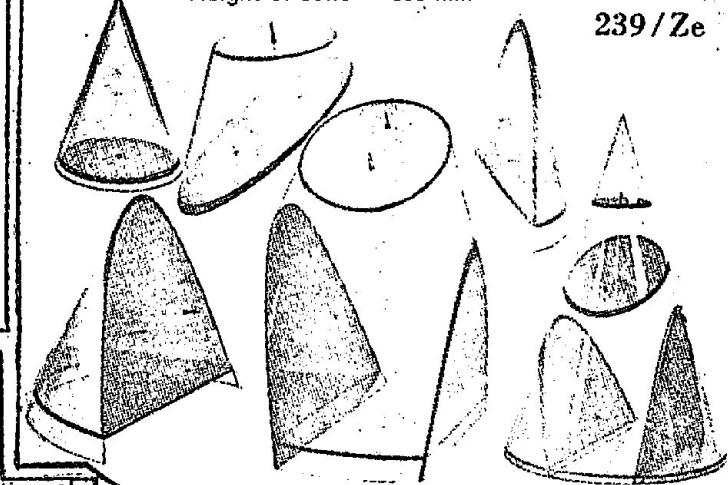

Cone with horizontal and vertical sections.
Height = 260 mm

239/Ze

MATHEMATICAL MODELS

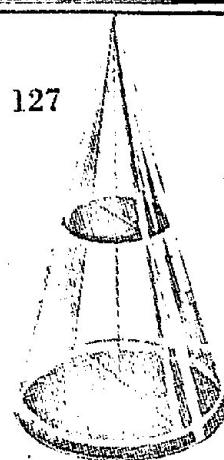

Cone with circle, ellipse, hyperbola and parabola.
Can be dismantled, as shown.
Height of cone = 300 mm

Octahedron inside cube, with various construction lines.
Edges of cube = 100 mm

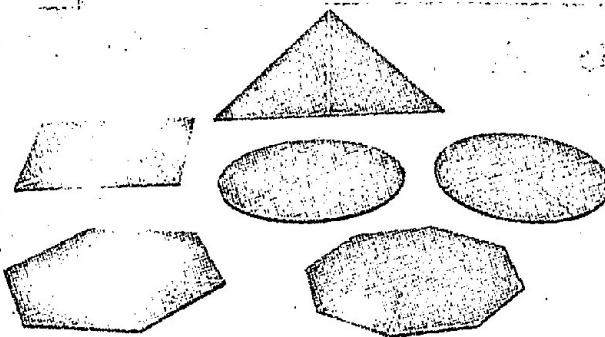

This model, being transparent, demonstrates well the projections of the enclosed octahedron on the sides of the cube and their relative dimensions.

127

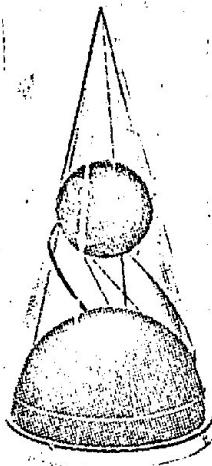

513

Models of regular piano figures.
 $A = 100 \text{ cm}^2$

Cone with spheres of contact and inclined elliptical plane section.
 Height = 260 mm
 For use in teaching conic sections and in deriving the equation of an ellipse.

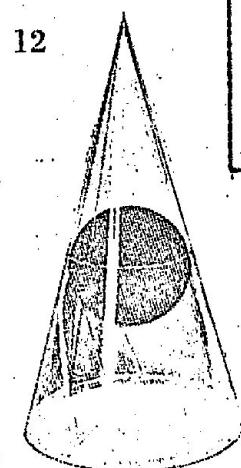

6

*Plexiglas*

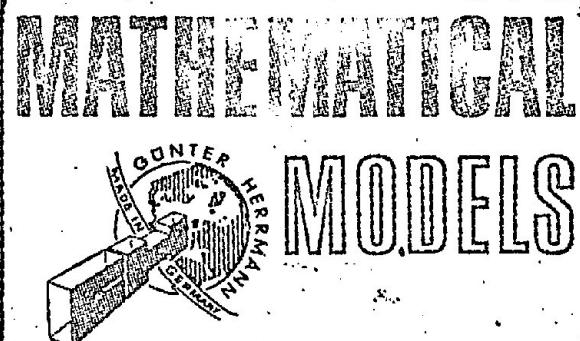

Cone with sphere of contact and parabolic section.
 Height = 260 mm
 Useful in the teaching of conic sections and in deriving the equation of a parabola.

12

4

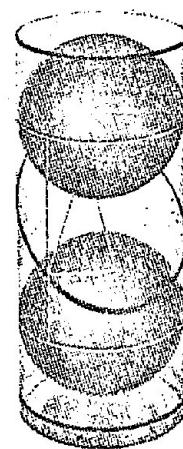

Demonstration model for the formula $A = 3, 14 r^2$
 Height = 260 mm
 This model is filled with sand which flows from a circle to a square when the model is inverted.

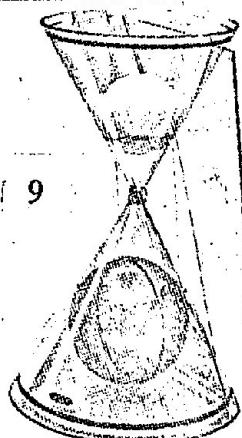

Cylinder with spheres of contact and inclined plane section.
 Height = 190 mm

6/Z

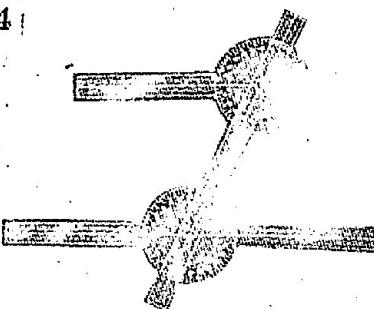

9

Double cone with hyperbolic section and spheres of contact.
 Height = 235 mm

624

Demonstration model for the angles formed by two parallel lines and a transversal.
 Length of parallels = 300 mm

MATEMÁTICA MODERNA MODELOS MATEMÁTICOS TRADUÇÃO

Modelo

Descrição

- 2 Cubo desmontável em 3 pirâmides iguais. Canto do cubo 100 mm. Este modelo é uma variante do modelo 3/G.
- 3/G Prisma triangular com lados iguais que se divide em 3 pirâmides triangulares do mesmo volume. Altura 200mm. Este modelo demonstra o fato de que o volume de uma pirâmide é de 1/3 do volume de um prisma com a mesma base a mesma altura.
- 4 Modelo de demonstração para a fórmula $A = 3,14 r^2$. Altura 200 mm. Este modelo tem enchimento de areia que corre de um círculo até um quadrado quando se vira o modelo.
- 6 Cone com esferas tangentes e seção plana inclinada. Altura 260mm. Para a demonstração de cortes cônicos e da equação de uma elipse.
- 6/Z Cilindro com esferas tangentes e seção plana inclinada. Altura 190mm.
- 8 Cone com esferas de contato com seção elíptica plana inclinada, dividida ao meio por um plano axial através do eixo maior da elipse; para demonstração da 2^a e 3^a dimensão.
- 9 Cone duplo com corte hiperbólico e esferas tangentes. Altura 235mm.
- 10 Cone com corte elíptico, parabólico e hiperbólico. Altura 260mm. Especialmente útil para ensinar cortes cônicos.
- 11/H Hexaedro (alturas 100mm).
- 11/T Tetraedro (alturas 150mm).
- 11/O Octaedro (alturas 100mm), de grande valor para o ensino de sólidos.
- 12 Cone com esferas tangentes e corte parabólico. Altura 260 mm. Útil na demonstração de cortes cônicos e a equação da parábola.

MODELOS MATEMÁTICOS - Tradução - Continuação

Modelo	Descrição
17/4	Prisma quadrilateral com corte diagonal. Altura 200mm.
19	Pirâmide que pode ser desmontada em base e ponta com eixo móvel. Altura total 200mm. Este modelo mostra a relação entre dois sólidos similares e também a relação entre a altura total e a altura do declive e uma pirâmide.
34	Modelo para a demonstração do teorema de Pitágoras. Hipotenusa 100mm. Este modelo consiste de elementos separáveis que podem ser usados para preencher o quadrado em cima da hipotenusa ou os quadrados em cima dos outros 2 lados.
36/N	Cubo de 10cm. transparente. Útil para ensinar volumes.
37	Modelo para demonstração da fórmula $V = (a + b)^3$; $(a + b) = 100\text{mm}$.
38	Icosaedro. Cantos 60mm.
40	Poliedro (combinacão de Hexaedro e Octaedro). Cantos 70mm.
41	Octaedro dentro do cubo, com várias linhas de estrutura. Cantos do cubo 100mm. Como o modelo é transparente, demonstra bem as projeções do octaedro inscrito nos lados do cubo e as dimensões delas.
127	Cone com cortes horizontais e verticais. Altura 260mm.
203	Modelo de demonstração para a fórmula $C = 3,14 \times d$ (circunferência de um círculo. No preço não está incluído a base 700/A e suporte 700/C. Dimensões 390 x 120mm.
210	Prisma quadrilateral. Com altura móvel e base colorida transparente. Altura 150mm.
212	Pirâmide hexagonal com altura e diagonais indicados, com base colorida. Altura de 150mm.
213	Prisma quadrilateral desmontável. Altura 150mm.
216	Cilindro com altura móvel e base colorida. Diâmetro 110mm.
217	Cilindro com altura móvel e base colorida. Diâmetro 80 mm. e altura 155mm.
234	Modelo para área do círculo. com quadrados inscritos e circunscritos. Desmontável, áreas em cores diferentes. 245 x 245 mm.
239/Za	Cone com corte circular e lipsoidal, hiperbólico e parabólico. Pode ser desmontado. Altura do cone de 300 mm.
212/Sa	Jogo de sólidos para enchimento com líquidos. Consiste de: Prisma triangular e pirâmide triangular, com a mesma base; Prisma quadrilateral e pirâmide quadrilateral, com a mesma base; Prisma octagonal e pirâmide octagonal, com a mesma base; Cilindro e cone, com a mesma base. Altura = 150mm.

MODELOS MATEMÁTICOS - Tradução - Continuação

Modelos	Descrição
241/Sa (Continuação)	Cubo e pirâmide quadrilateral, com a mesma base. Altura da pirâmide e canto do cubo = 100mm. Esfera - Diâmetro = 100mm. Hemisfério, cilindro e cone. Altura do cone e cilindro = ao raio dos três sólidos = 60mm
247	Modelo para demonstração do teorema de Pitágoras, com áreas transparentes de várias cores. Desmontável, de 240 x 240mm.
513	Modelos de figuras planas regulares. (Área = 100 cm ²).
607	Compasso elíptico. (Diâmetro do círculo = 270mm.)
624	Modelo para demonstração de ângulos, formados por duas li- nhas paralelas e uma linha transversal. Comprimento das pa- ralelas = 300mm.
970	Modelo de demonstração de esferas.
